

John Bass

Frontend Software Engineer

Coyle, OK | 405-385-4231 | bassjohn159@yahoo.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

Summary

Frontend developer and graduate of the FES Institute Frontend Development Bootcamp, with hands-on experience building responsive, component-driven web applications using React, Next.js, and TypeScript. Experienced converting Figma designs into production-style UI, integrating REST APIs and third-party services (Firebase, Stripe), and building full-stack projects with Node.js and Express. Comfortable with state management (Redux Toolkit, Context API), Tailwind CSS, and Git-based collaborative workflows. Currently deepening skills in advanced TypeScript patterns, accessibility (ARIA), and frontend testing fundamentals.

Education

FES Institute — Frontend Development Bootcamp · Graduated June 26, 2026

Redmond High School — Diploma · Graduated 2001

Certifications

Certificate of Graduation — Frontend Development Bootcamp, FES Institute · June 2026

Verified proficiencies: HTML, CSS, JavaScript, React, Next.js, Node.js, TypeScript, Redux. Includes completion of a practical internship in a professional environment.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frontend: React, Next.js, Redux Toolkit, Context API, Tailwind CSS, responsive UI design, component-based architecture, reusable component libraries, Figma-to-code workflow

Backend / APIs: Node.js, Express.js, REST API integration, Firebase, Firestore, Stripe, PostgreSQL, Prisma, JWT auth, bcrypt

Tools & Workflow: Git, GitHub, VS Code, npm, Vite, Vercel, Railway, Render, Docker, pgAdmin 4, CI/CD fundamentals, AI-assisted development tools (Claude Code/Cowork, GitHub Copilot)

Cloud & Storage: Cloudflare R2, Firebase/Firestore, GitHub Pages

Currently Learning: Advanced TypeScript patterns, accessibility (ARIA) and inclusive design, frontend testing fundamentals

Work Experience

Frontend Engineering Intern — Figma to React Implementation

Skinstric (via FES Institute) | 2-week internship

Live: [skinstric-internship1.vercel.app](#) · Code: github.com/jbass-dev/Skinstric-Internship1

- Built an AI skin-analysis platform to a pixel-perfect Figma spec using a reusable React component library.
- Implemented live selfie capture with the browser camera API (getUserMedia) and photo upload, sending images base64-encoded to an AI API.
- Rendered results in an interactive demographics dashboard with editable confidence scores, fully responsive across desktop, tablet, and mobile.
- Applied TypeScript to improve type safety and maintainability across components.
- Shipped through a CI/CD pipeline to Vercel in a structured development workflow.

Shop Manager

Shines Kwik Lube | 2018 – 2025

- Managed daily operations and a staff of 5 employees — scheduling, inventory management, and customer service — building the process discipline and deadline focus I now bring to engineering work.

Projects

StoryForge — AI Short-Video Generation Pipeline

Next.js, Node.js/Express, TypeScript, PostgreSQL, Groq (Llama 3.3 70B), FFmpeg, Cloudflare R2, Railway, Vercel

Live: story-forge-tau-three.vercel.app · Code: github.com/jbass-dev/StoryForge

- Built an end-to-end pipeline turning a single prompt into a finished short-form vertical video: an LLM generates a structured script and per-scene image prompts, an image-generation service renders comic-style scene art, and FFmpeg assembles pans, burned-in captions, and mixed narration/music into a 1080x1920 MP4.
- Designed the production infrastructure end-to-end: a Node.js/Express API on Railway backed by PostgreSQL, Cloudflare R2 for video storage, and a Next.js (Vercel) frontend with a TikTok/Reels-style vertical scroll-snap feed.
- Built in resilience by design: rate-limit backoff/retry around external API calls and graceful fallback to silent/caption-only output when an optional service isn't configured, so the pipeline degrades instead of failing.

CRM AI — AI-Powered Customer Relationship Manager

Next.js, Node.js/Express, Prisma, PostgreSQL, Docker, Railway, OpenAI API

Live: independent-perfection-production-c08c.up.railway.app · Code: github.com/jbass-dev/crm-ai

- Built a full-stack CRM with customer/contact management, file uploads, and role-based permissions (Admin/Manager/Rep).
- Layered AI features on top: meeting summaries, follow-up email drafts, and a customer Q&A chatbot.
- Containerized with Docker for local development and deployed as three services (frontend, backend, Postgres) on Railway.

OfferBound — Job-Application Tracker with ATS Resume Scanner

React, Vite, Firebase, Firestore

Live: offerbound.vercel.app · Code: github.com/jbass-dev/OfferBound

- Designed and built a full-stack job-application tracker from scratch — Google auth, a live stats dashboard, and follow-up reminders.
- Built a Resume Scanner that scores a resume against a job description for ATS match, with keyword and formatting feedback.
- Implemented scalable, component-based frontend architecture focused on maintainability and reuse across views.

Nimbus — Multi-Model AI Chat Interface

Next.js, React, TypeScript, Tailwind CSS, OpenRouter API

Live: deep-seek-clone-wine.vercel.app · Code: github.com/jbass-dev/ai-chat-interface

- Built a multi-model chat interface from scratch around the OpenRouter API — live token streaming, markdown rendering, and persistent conversations.
- Supports switching between models (DeepSeek, Llama, Gemma) mid-conversation with per-conversation history.

Mini Expense Tracker — Full-Stack Auth Deep-Dive

Express, PostgreSQL, JWT, bcrypt, Render, GitHub Pages

Live: jbass-dev.github.io/miniexpensetracker · Code: github.com/jbass-dev/miniexpensetracker

- Built a full-stack expense tracker to go deep on authentication: bcrypt password hashing, rotating JWT access/refresh tokens, and a one-time-token forgot/reset-password flow, with all routes scoped per-user.
- Deployed the backend on Render with a Render-managed PostgreSQL database and the frontend on GitHub Pages.
